**vector calculus - mecmath** - which has those features is an arrow, which in elementary geometry is called a "directed line segment". this is the motivation for how we will define a vector. definition 1.1. a (nonzero) vector is a directed line segment drawn from a point  $p$  (called its initial point) to a point  $q$  (called its terminal point), with  $p$  and  $q$  being distinct ... **vector geometry for computer graphics** - james r. miller university of kansas. ...
